

“Where” is not so important.

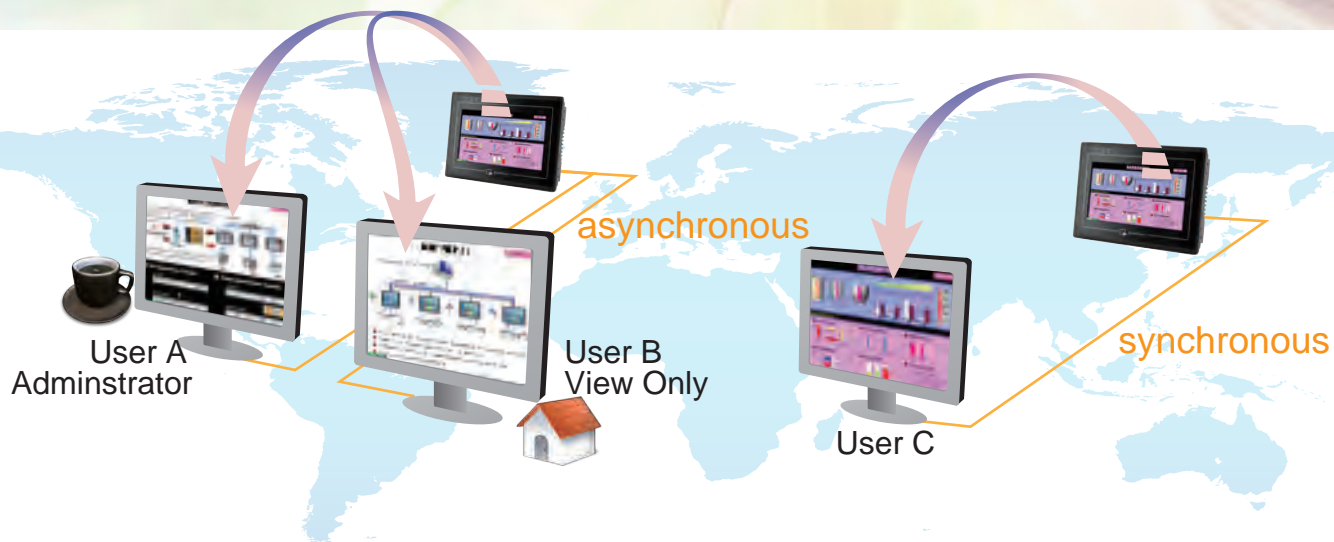

Put touch screens online, they are all at your hand- **Easy Access**

Via Easy Access technology, you can easily access to any Weintek MT8000 i / X connected to the Internet and perform operations on your PC everywhere.

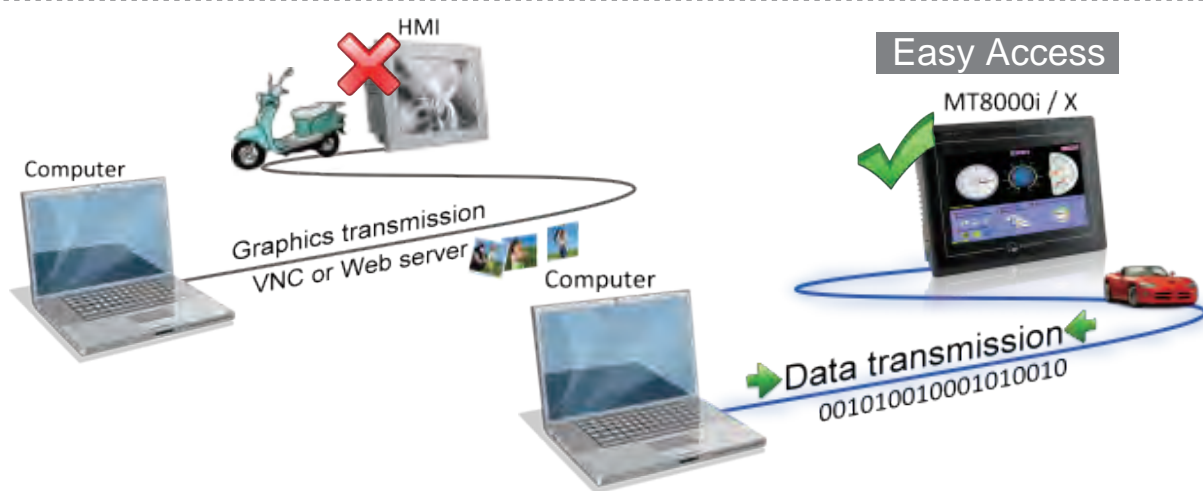

Remote Monitor Software

No matter in your office or a coffee shop, once your PC is online you can operate and display the screens of the production fields whenever you like. Real time data management and monitoring can be done without creating another new project. Don't worry!! Remote project maintenance is perfectly safe.

More Efficient Communication

Compared to VNC remote control or web server technology, Easy Access is faster and more stable. No need to wait for the graphic images to be transmitted via Internet dramatically reduces the bandwidth requirement which makes it extremely efficient.

Don't worry where HMI is!

Feel annoyed by memorizing HMI address? By breakthrough technology, Easy Access uses predefined name to instinctively find your remote HMI devices. Even for floating IP, you can still freely connect, manage, and control it in real time.
