

BACnet/IP

Supported series: BACnet/IP protocol devices

HMI Setting:

Parameters	Recommended	Options	Notes
PLC type	BACnet/IP		
PLC I/F	Ethernet		
Port no.	47808		47808 is the standard communication port of BACnet protocol.
HMI port no.	47808	47808~47823 49152~65535	Different HMI ports are required when connecting multiple
Device ID	342566	0~999999	According to device.
PLC sta. no.	1		

BACnet/IP to MS/TP Adapter Setting:

1. When using BACnet/IP driver, please correctly set "Mode", "Maximum number of segments accepted", and "Maximum APDU length accepted" according to the actual device.

IP Address Settings

IP address : 192 . 168 . 1 . 111 Who Is...

Port no. : 47808

Mode : Normal

Maximum number of segments accepted : [BACnet/IP to MS/TP] Adapter

Maximum APDU length accepted : 480 (fits ARCNET frame)

Timeout (sec) : 1.0 Turn around delay (ms) : 0

HMI port no. : 47808

Device ID (0~4194302) : 342566

The number of resending commands : 0

OK Cancel

**BACnet/IP to
MS/TP adapter**

2. As shown above, in BACnet/IP to MS/TP Adapter mode, [Network number] must follow the factory setting, and enter the device station number in [Device ID].

3. [HMI port no]. default: 47808, can be filled in other effective value.

How to Import Tags:

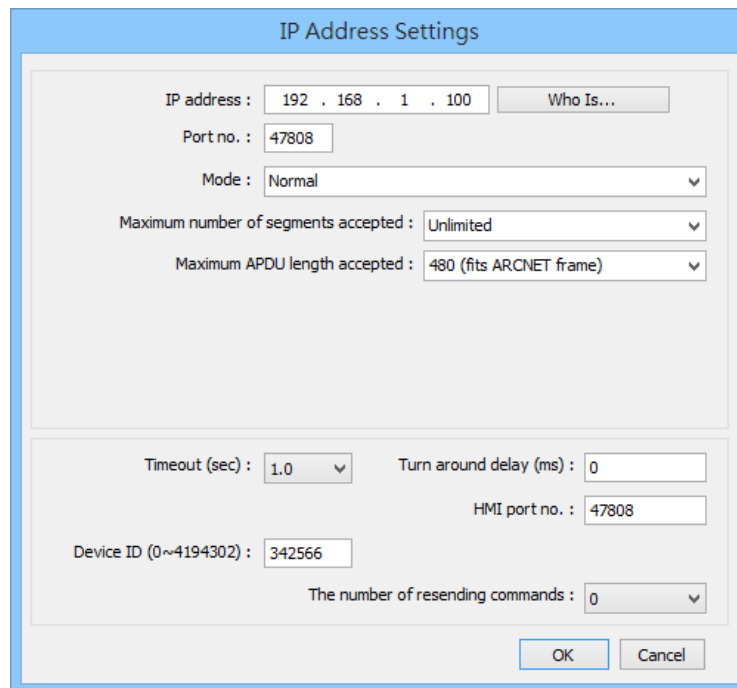

EasyBuilder Pro provides two ways to gain tag addresses. One is to directly get tag information via internet, another is to export the generated CSV file via SCADA, and then import to EasyBuilder Pro. The following introduces how to import tag address information.

Step 1. Add BACnet/IP driver in System Parameters Settings

The screenshot shows the 'Device Settings' dialog box with the following configuration:

- Name:** BACnet/IP
- Device type:** BACnet/IP (selected from a dropdown menu)
- Device ID:** 405, V.4.40, BACNET_IP.c30
- I/F:** Ethernet (selected from a dropdown menu)
- Location:** Local (selected from a dropdown menu)
- IP:** 192.168.1.100, Port=47808, HMI port no.=47808
- Settings...** button next to the IP field
- Enable [Read Property Multiple] service:** ☐
- Enable COV (Change Of Value):** ☐
- Buttons:** OK, Cancel

Step 2. Correctly set the relevant parameters.

IP Address Settings

IP address : 192 . 168 . 1 . 100 Who Is...

Port no. : 47808

Mode : Normal

Maximum number of segments accepted : Unlimited

Maximum APDU length accepted : 480 (fits ARCNET frame)

Timeout (sec) : 1.0 Turn around delay (ms) : 0

HMI port no. : 47808

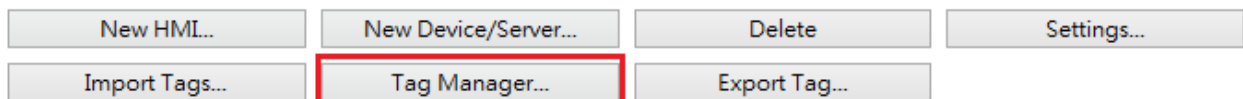

Device ID (0~4194302) : 342566

The number of resending commands : 0

OK Cancel

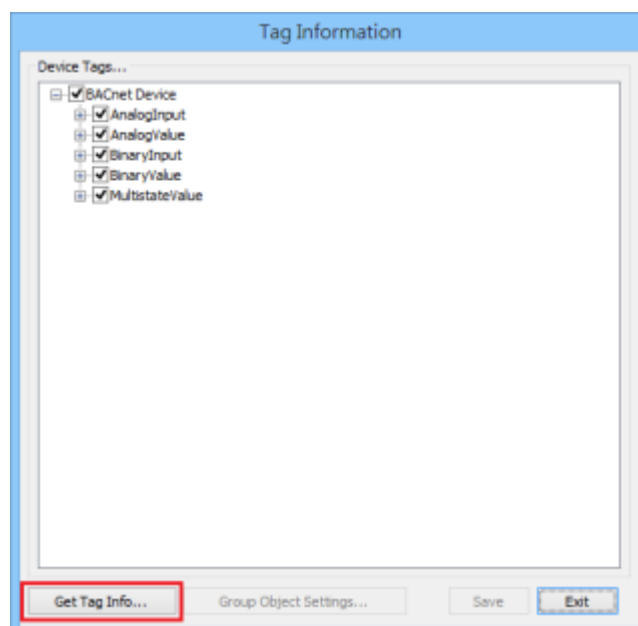

Step 3. Get tag address information

Way 1: Click **Tag Manager** -> **Get Tag Info**

New HMI... New Device/Server... Delete Settings...

Import Tags... **Tag Manager...** Export Tag...

Tag Information

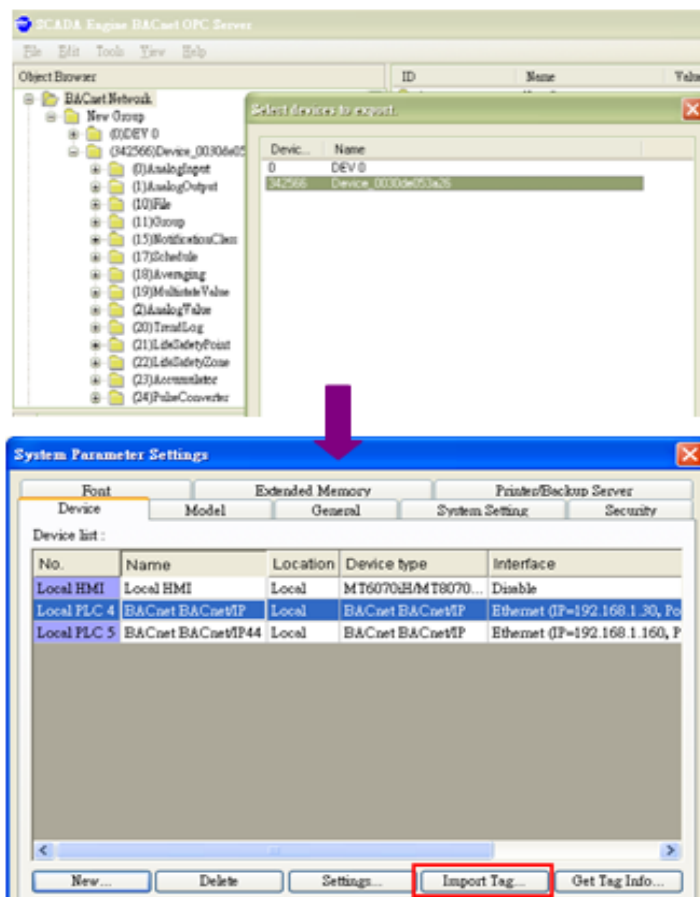

Device Tags...

- ☒ BACnet Device
 - ☒ AnalogInput
 - ☒ AnalogValue
 - ☒ BinaryInput
 - ☒ BinaryValue
 - ☒ MultistateValue

Get Tag Info... Group Object Settings... Save Exit

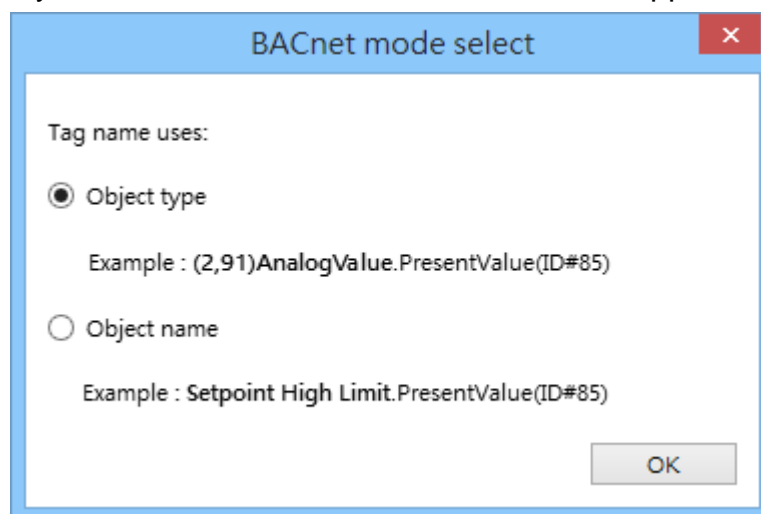

Way 2: Import the CSV file generated by SCADA software.

*Support files exported by BACShark software

BACnet mode select: Object type or Object name

When using Get tag or import SCANDA Software to create a csv file, you can select BACnet mode. (EasyBuilder Pro V6.04.02 and later versions support this function)

CSV file content is shown below; users can build the file and import:

- Object format
- OBJECT NAME (user defined tag name, EasyBuilder will start reading data from the 6th row of CSV file.), DEVICE ID, OBJECT TYPE(object ID) and INSTANCE(object address)

A1		GROUP_ID	
A	B	C	D
1	GROUP_ID	GROUP_NAME	
2	1	New Group	
3	DEVICE_ID	GROUP_ID	DEVICE_NAME
4	342566	1	Device_0030de053a26
5	DEVICE_ID	OBJECT_TYPE	INSTANCE
6	342566	0	0 ANALOG_INPUT_0
7	342566	0	1 ANALOG_INPUT_1
8	342566	0	2 ANALOG_INPUT_2
9	342566	1	0 ANALOG_OUTPUT_0
10	342566	1	1 ANALOG_OUTPUT_1
11	342566	1	2 ANALOG_OUTPUT_2
12	342566	2	0 ANALOG_VALUE_0
13	342566	2	1 ANALOG_VALUE_1
14	342566	2	2 ANALOG_VALUE_2
15	342566	2	3 ANALOG_VALUE_3
16	342566	3	0 BINARY_INPUT_0
17	342566	3	1 BINARY_INPUT_1
18	342566	3	2 BINARY_INPUT_2
19	342566	3	3 BINARY_INPUT_3
20	342566	3	4 BINARY_INPUT_4
21	342566	3	5 BINARY_INPUT_5

Step 4. File imported successfully.

Take **(10,2)File** as an example, **10** represents object ID, **2** represents object address, **File** represents user defined name or default name.
