Warning!

This equipment generates, uses and can radiate radio frequency energy and if not installed and used in accordance with the instructions manual, it may cause interference to radio communications. It has been tested and found to comply with the limits for a Class A computing device pursuant to FCC Rules, which are designed to provide reasonable protection against such interference when operated in a commercial environment. Operation of this equipment in a residential area is likely to cause interference in which case the user at his own expense will be required to take whatever measures may be required to correct the interference.

Electric Shock Hazard – Do not operate the machine with its back cover removed. There are dangerous high voltages inside.

Caution

Risk of explosion if the battery is replaced with an incorrect type.

Batteries should be recycled where possible. Disposal of used batteries must be in accordance with local environmental regulations.

Safety Precautions

Follow the messages below to prevent your systems from damage:

- ◆ Avoid your system from static electricity on all occasions.
- ◆ Prevent electric shock. Don't touch any components of this card when the card is power-on. Always disconnect power when the system is not in use.
- ◆ Disconnect power when you change any hardware devices. For instance, when you connect a jumper or install any cards, a surge of power may damage the electronic components or the whole system.

1.4 Brief Description of ARCHMI-9XXA Series

There are 12.1" ~ 32" Industrial Compact Size Panel PC in ARCHMI-9XXA series, which comes with flat front panel touch screen and fanless design. It is powered by Intel 6th Generation Core i3/i5(option) CPU Processors with one SO-DIMM DDR4L slot, up to 16GB 2133 MHz. These systems support DC 9~36V wide-ranging power input and IP66 compliant front panel. Optional projected capacitive touch support 7H anti-scratch surface is ideal for use as PC-based controller for Industrial Automation & Factory Automation. Furthermore, ARCHMI-9XXA Series are capable of expanding the function by option expansion I/O boards, TB-528 series, includes Mini-PCIe, CAN bus, POE, USB, and isolation I/O module to improve competitive advantage through providing critical flexibility and expansibility for the variety of application and requirement.

1.5 Installation of HDD

Step 1

There are 2 screws to deal with when enclosing or removing the chassis. Gently remove 2 screws.

Step 2

You can put or remove HDD into the machine by pulling the HDD bracket.

Step 3

You can remove HDD by unscrewing 4 screws in the HDD bracket. Note: 4 screws are packed in the packing package.

1.6 Installation of HDD for 32"

Step 1

There are 4 screws to deal with when enclosing or removing the chassis. Gently remove 4 screws.

Step 2

You can put or remove HDD into the machine by pulling the HDD bracket.

Step 3

You can remove HDD by unscrewing 4 screws in the HDD bracket. Note: 4 screws are packed in the packing package.

1.7 VESA Mounting

The ARCHMI-9XXA series is designed to be VESA mounted as shown in Picture. Just carefully place the unit through the hole and tighten the given screws from the rear to secure the mounting.

Figure 1.15: ARCHMI-9XXA Series VESA Mounting

1.8 Panel Mounting

There are four holes located along the four sides of the HMI. Insert the clamp from the four sides and tighten them with the nuts provided.

2.1 Motherboard Introduction

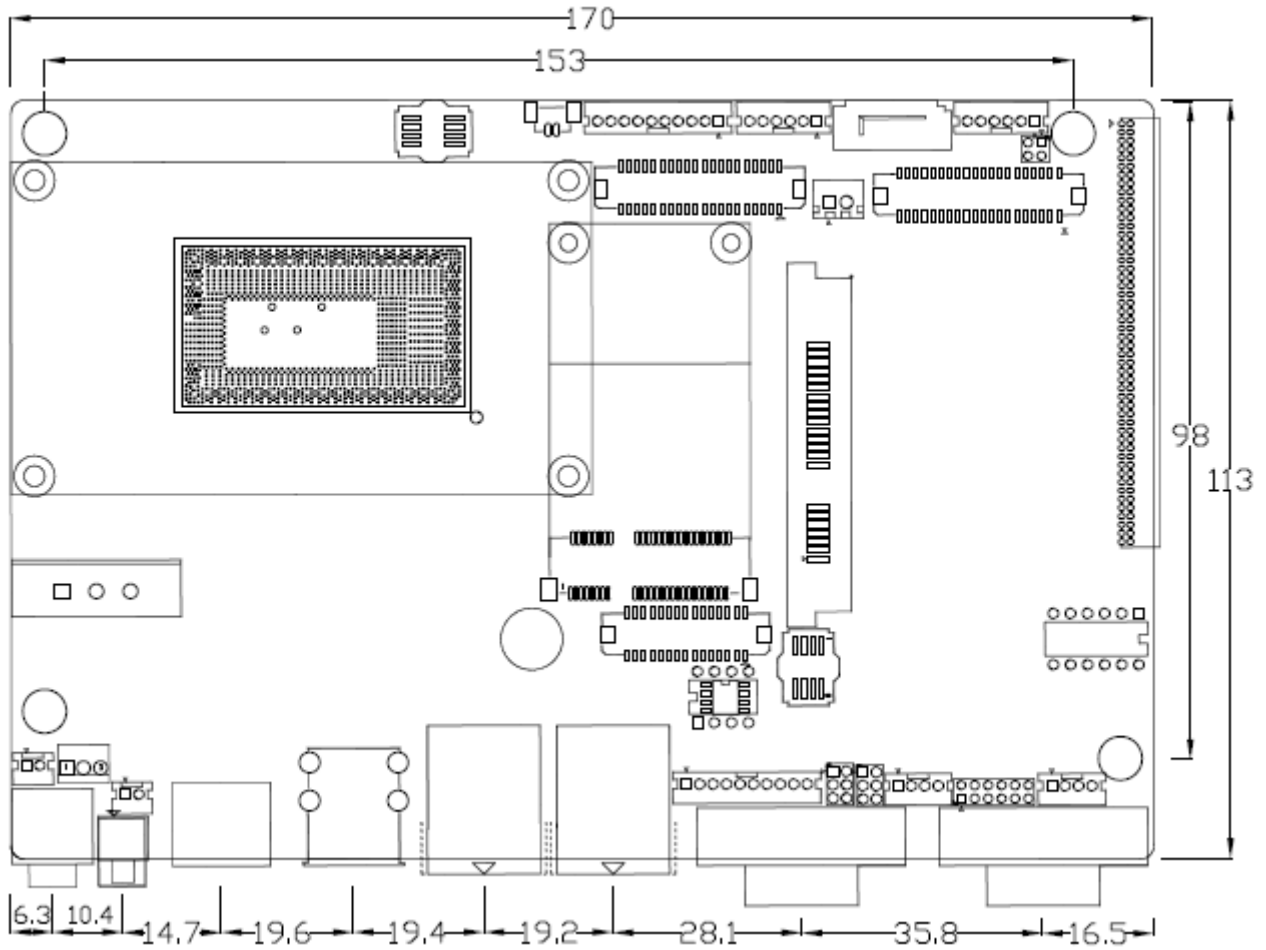

SBC-7114 is a 4" industrial motherboard developed on the basis of Intel Skylake-U/Kabylake-U Processor, which provides abundant peripheral interfaces to meet the needs of different customers. Also, it features dual GbE ports, 6-COM ports and one mSATA configuration, one HDMI port, one LVDS interface. To satisfy the special needs of high-end customers, CN1 and CN2 and CN3 richer extension functions. The product is widely used in various sectors of industrial control.

CPU1 Heat Sink Screw holes, four screw holes for Intel skylake-U Processors. Heat Sink assemblies.

3. FAN1:

(2.54mm Pitch 1x3 Pin Header), Fan connector, cooling fans can be connected directly for use. You may set the rotation condition of cooling fan in menu of BIOS CMOS Setup.

Pin#	Signal Name
1	Ground
2	VCC
3	Rotation detection

Note:

Output power of cooling fan must be limited under 5W.

4. DDR4_1:

(SO-DIMM 260Pin socket), DDR4 memory socket, the socket is located at the top of the board and supports 260Pin 1.2V DDR4 2133MHz FSB SO-DIMM memory module up to **16GB**.

5. BAT3 :

(1.25mm Pitch 1x2 Wafer Pin Header, SMD) 3.0V Li battery is embedded to provide power for CMOS. CMOS clear operation will permanently reset old BIOS settings to factory defaults.

Pin#	Signal Name
Pin1	Ground
PIN2	VBAT

Procedures of CMOS clear:

- Turn off the system and unplug the power cord from the power outlet.
- Remove the lithium battery connection from BAT3 for 10 seconds, and then connect it.
- Power on the system again.
- When entering the POST screen, press the <ESC> or key to enter CMOS Setup Utility to load optimal defaults.
- After the above operations, save changes and exit BIOS Setup.

35. USB1:

USB3-1/USB3-2 : (Double stack USB type A), Rear USB connector, it provides up to two USB3.0 ports, High-speed USB 2.0 allows data transfers up to 480 Mb/s, USB 3.0 allows data transfers up to 5.0Gb/s, support USB full-speed and low-speed signaling.

Each USB Type A Receptacle (2 Ports) Current limited value is **2.0A**.

If the external USB device current exceeds 1.5A, please separate connectors into different Receptacle.

36. LAN1/LAN2:

LAN1/LAN2: (RJ45 Connector), Rear LAN port, Two standard 10/100/1000M RJ-45 Ethernet ports are provided. Use Intel 82574L chipset, LINK LED (green) and ACTIVE LED (green) respectively located at the left-hand and right-hand side of the Ethernet port indicate the activity and transmission state of LAN.

37. BUZ1:

Onboard buzzer.

38. CN2:

(DF13-30P Connector), For expand output connector, it provides eight GPIOs, two RS422 or RS485, one USB2.0, one Power on/off, one Reset.

3.6 Security Settings

3.6.1 Administrator Password

3.6.2 User Password

Type the password with up to 20 characters and then press <Enter> key. This will clear all previously typed CMOS passwords. You will be requested to confirm the password. Type the password again and press <Enter> key. You may press <Esc> key to abandon password entry operation.

To clear the password, just press <Enter> key when password input window pops up. A confirmation message will be shown on the screen as to whether the password will be disabled. You will have direct access to BIOS setup without typing any password after system reboot once the password is disabled.

Once the password feature is used, you will be requested to type the password each time you enter BIOS setup. This will prevent unauthorized persons from changing your system configurations.

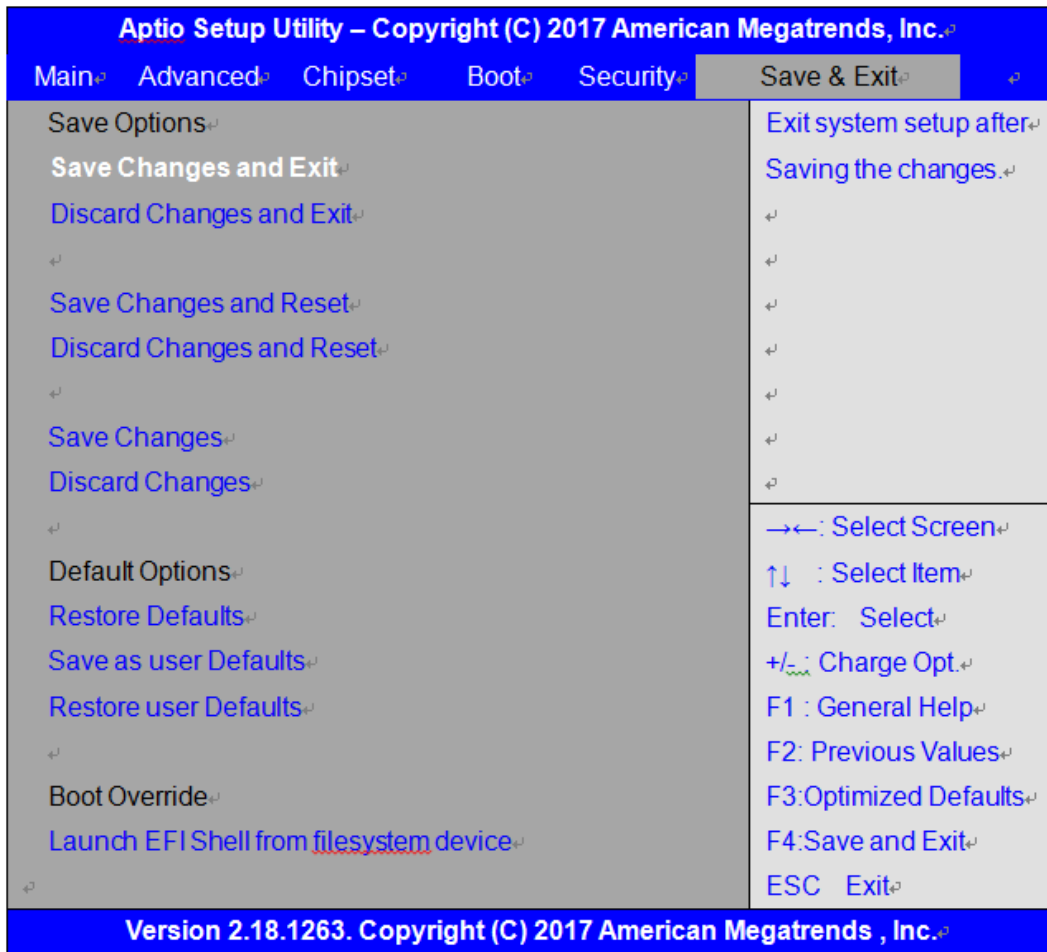

Also, the feature is capable of requesting users to enter the password prior to system boot to control unauthorized access to your computer. Users may enable the feature in Security Option of Advanced BIOS Features. If Security Option is set to System, you will be requested to enter the password before system boot and when entering BIOS setup; if Security Option is set to Setup, you will be requested for password for entering BIOS setup.

Chapter 4 Installation of Drivers

This chapter describes the installation procedures for software and drivers under the windows 8.1 & 10. The software and drivers are included with the motherboard. The contents include **Intel H170 , Graphics 530 chipset driver, Audio driver, IntelR management engine interface, and DPTF Driver Installation instructions are given below.**

Important Note:

After installing your Windows operating system, you must install first the Intel Chipset Software Installation Utility before proceeding with the installation of drivers.

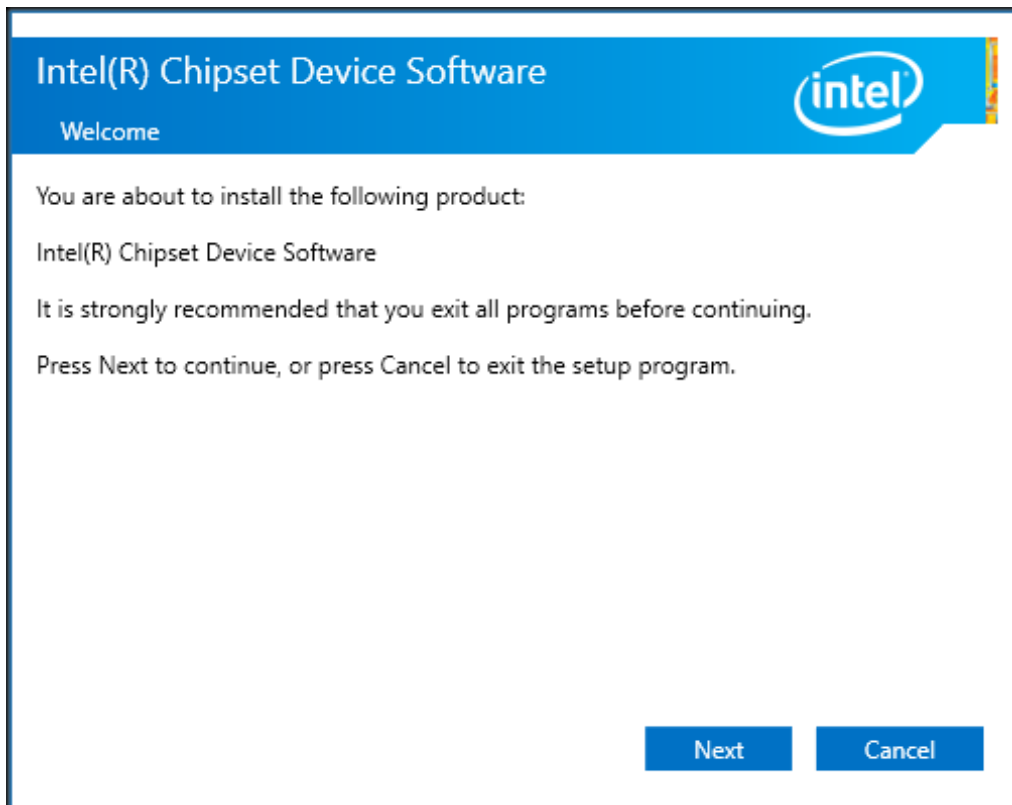

4.1 Intel H170 Chipset

To install the Intel H170 chipset driver, please follow the steps below.

Step 1. Select **Intel H170 Chipset** from the list

Step 2. Here is welcome page. Please make sure you save and exit all programs before install. Click **Next**.

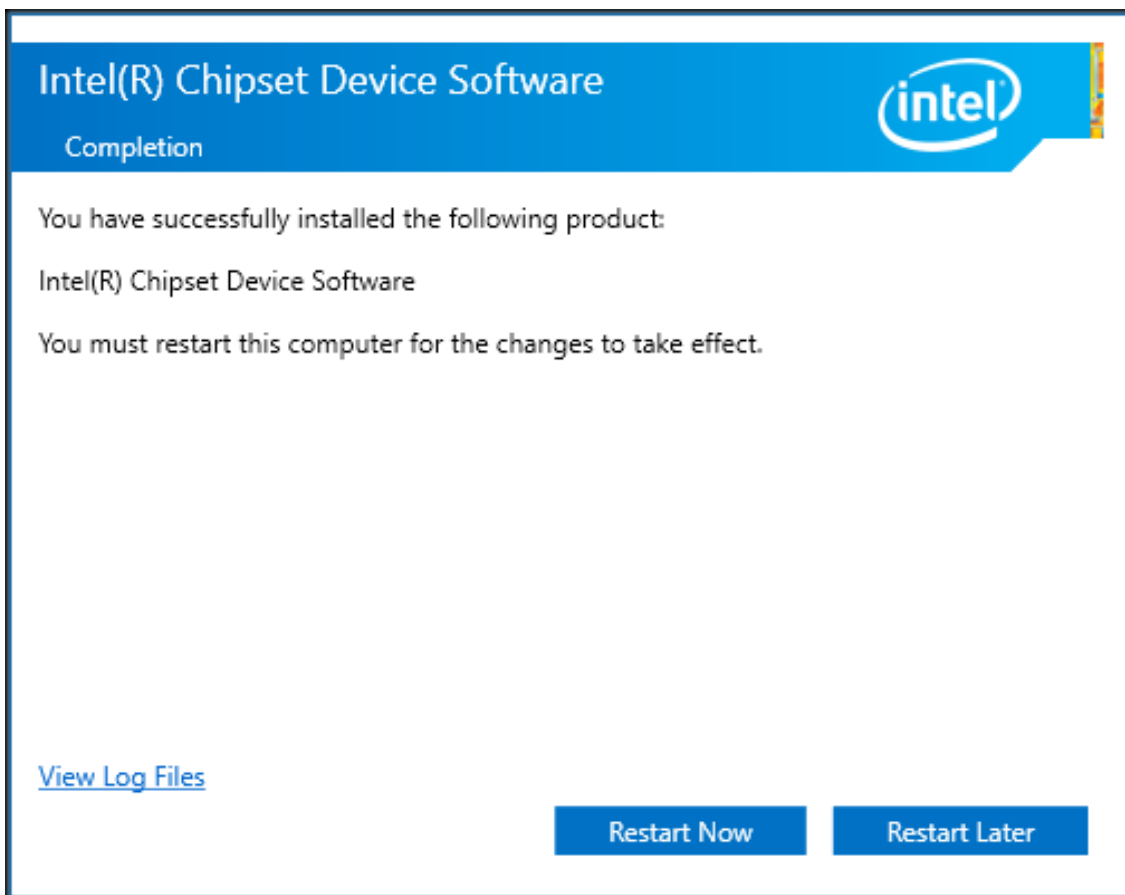

Step 3. Read the license agreement. Click **Accept** to accept all of the terms of the license agreement.

Step 4. Click **Install** to begin the installation.

Step 5. Select **Restart Now** to reboot your computer for the changes to take effect.

4.2 Intel® HD Graphics 530 Chipset

To install the Intel® HD Graphics 530 Chipset, please follow the steps below.

Step 1. Select Intel® HD Graphics 530 Chipset from the list.

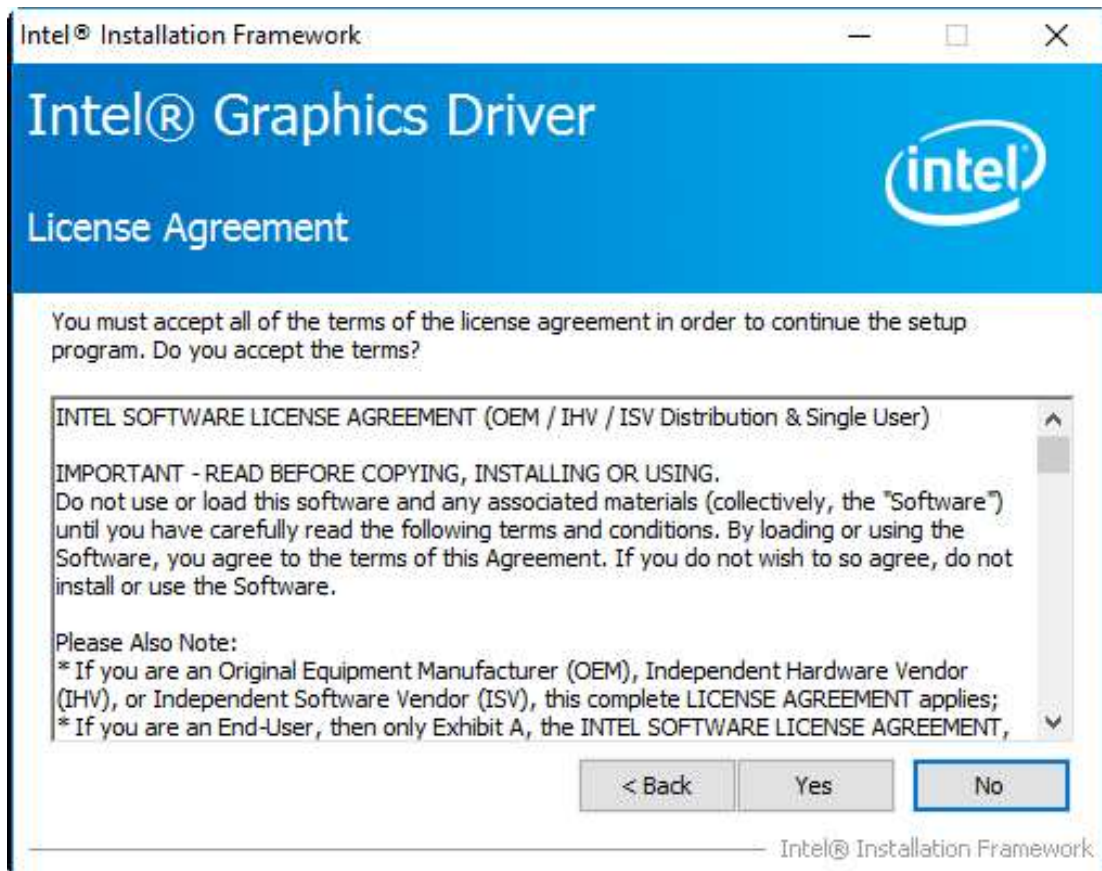

Step 2. . Click Next.

Step 3. Choose **automatically run** function and Click **Next** to setup program.

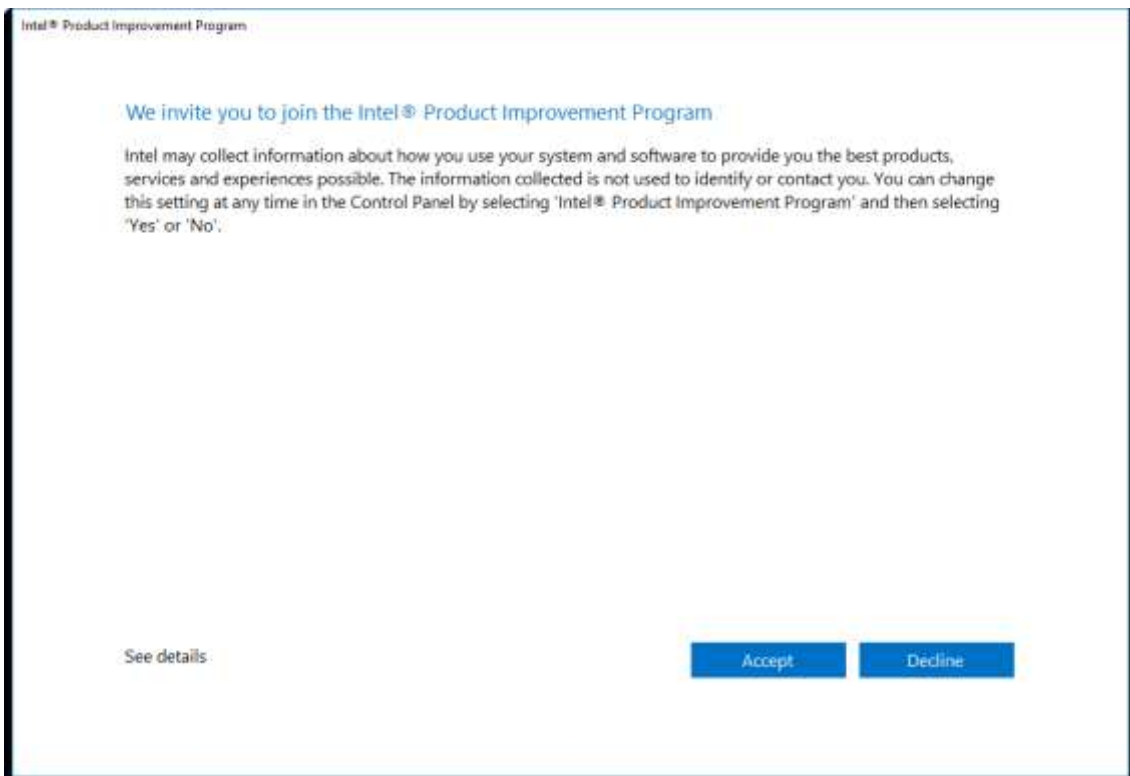

Step 4. Read the license agreement. Click **Yes** to accept all of the terms of the license agreement.

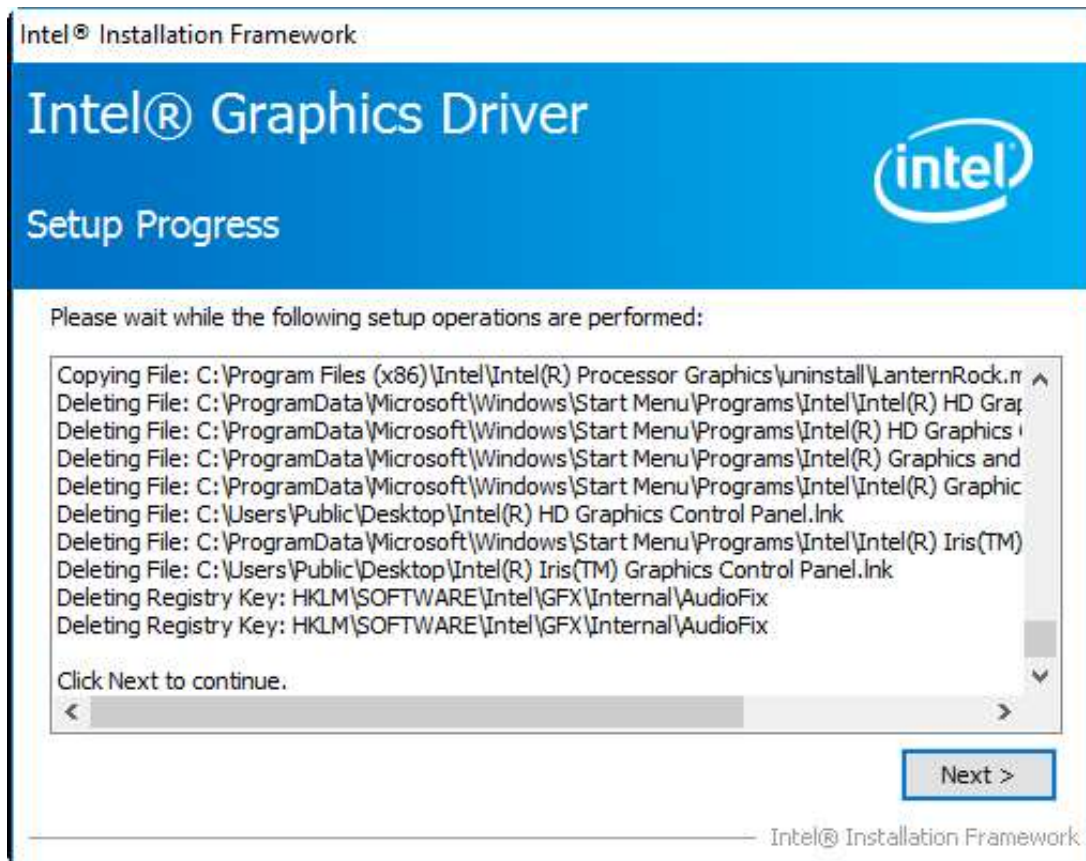

Step 5. Click **Next** to continue.

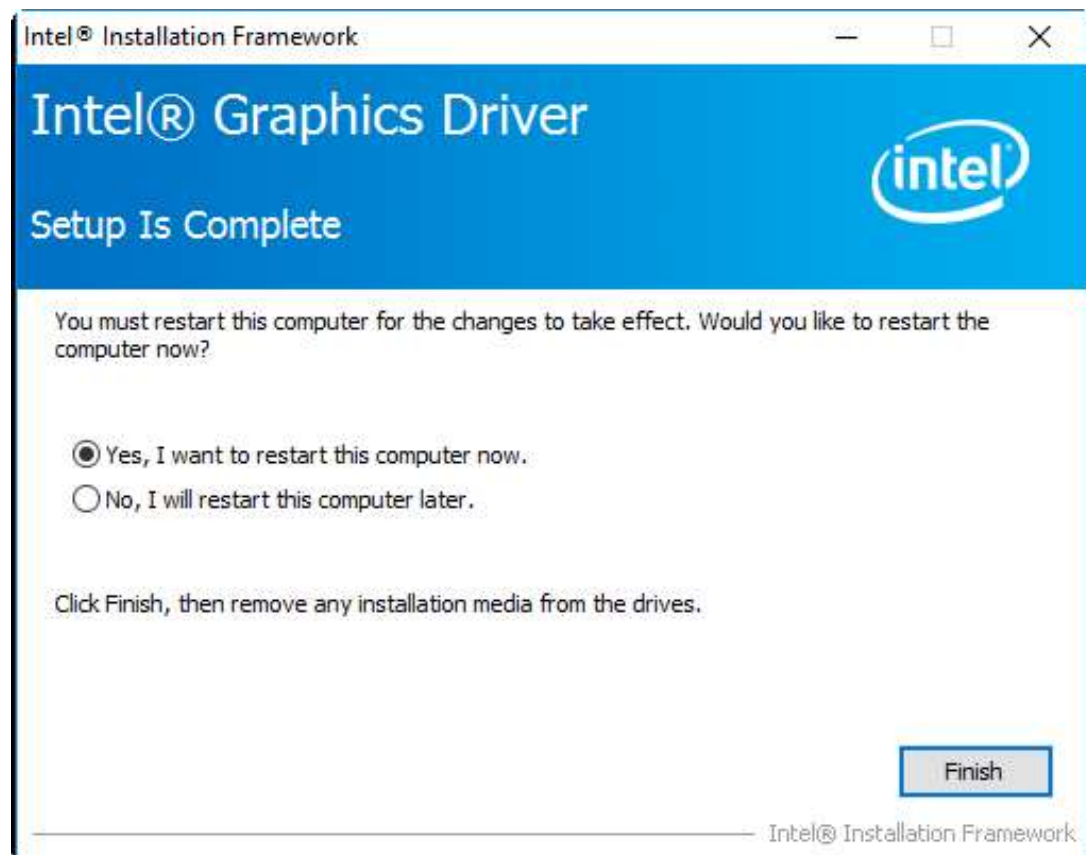

Step 6. Here is Intel product improvement program information, you can choose **Accept** or **Decline** by your option and installation will go to next step.

Step 7. Click **Next** to continue the program.

Step 8. Select **Yes, I want to restart this computer now.** Click **Finish** to complete installation.

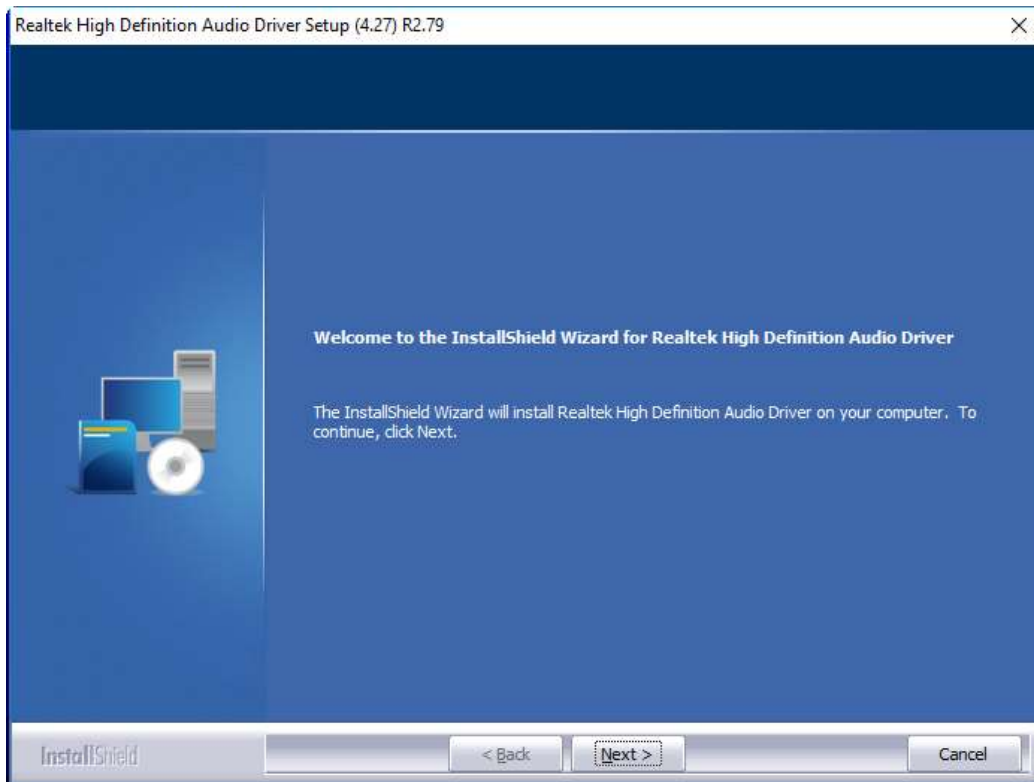

4.3 Realtek ALC662 HD Audio Driver Installation

To install the Realtek ALC662 HD Audio Driver, please follow the steps below.

Step 1. Select Realtek AL662 HD Audio Driver from the list

Step 2. Click Next to continue.

Step 3. Click **Yes, I want to restart my computer now.** Click **Finish** to complete the installation.

4.4 Intel® Management Engine Interface

To install the Intel® Management Engine Interface, please follow the steps below.

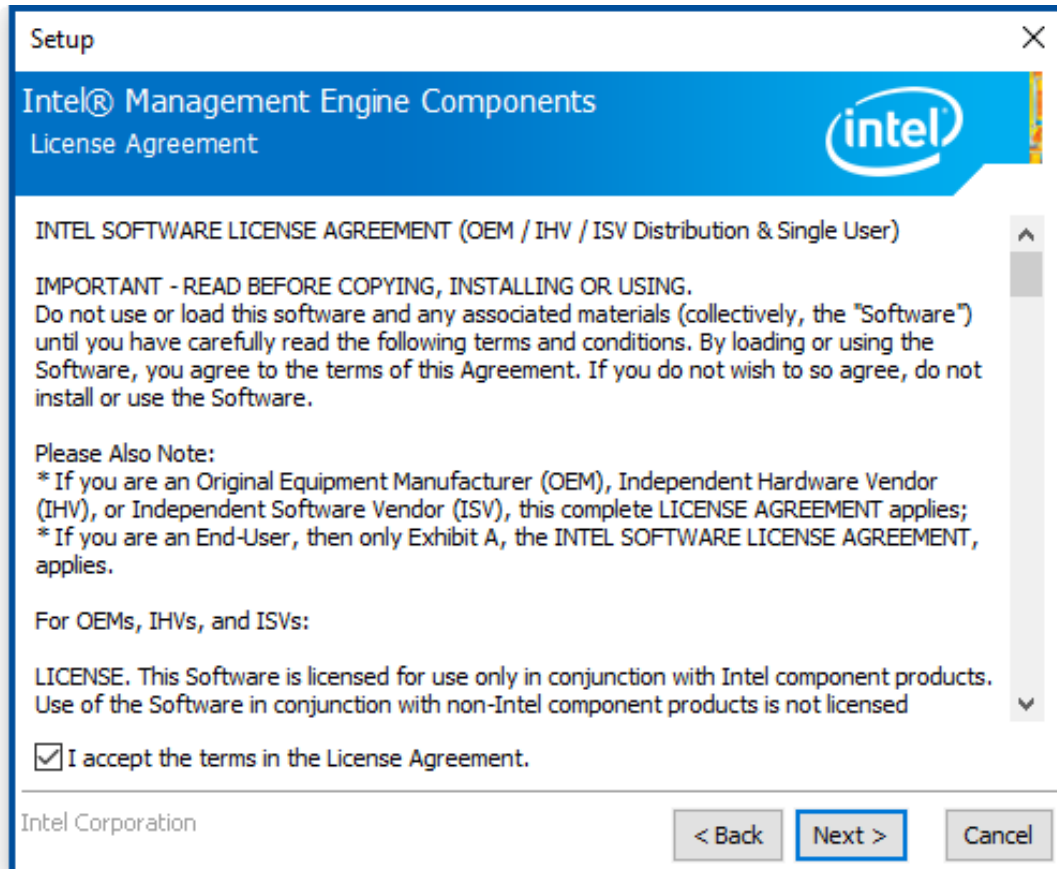

Step 1. Select **Intel® Management Engine Interface** from the list

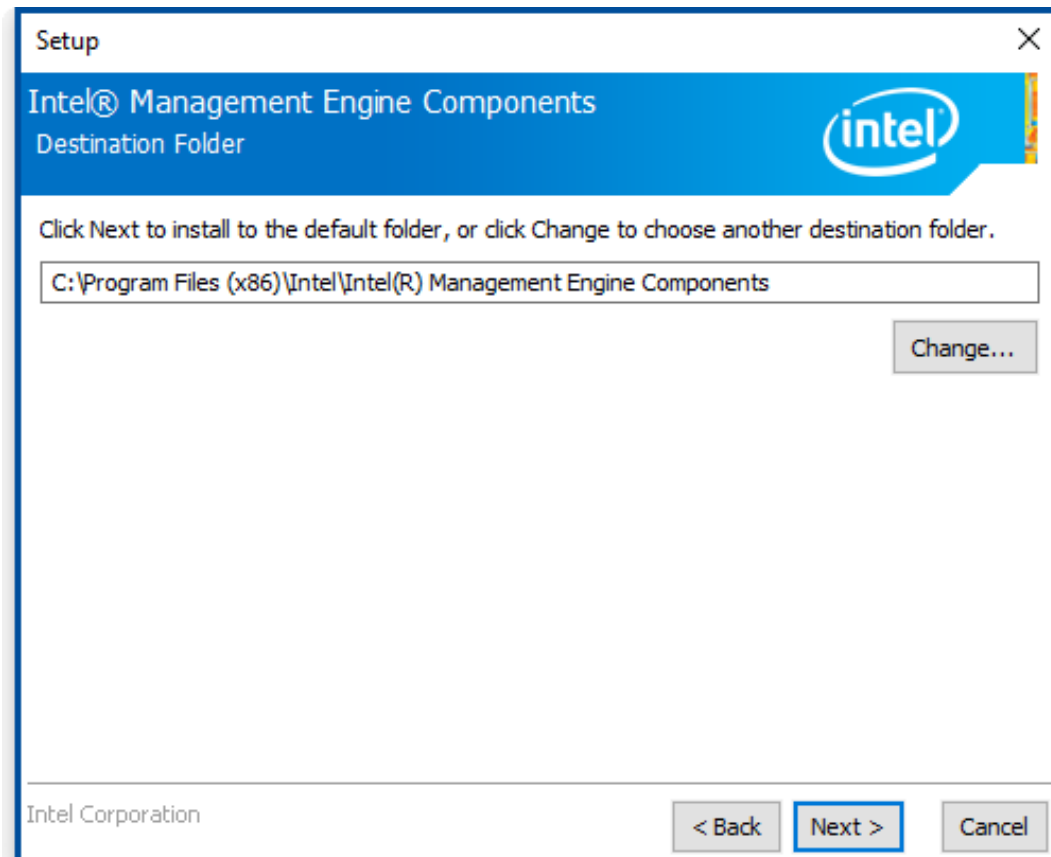

Step 2. Select setup language you need. Click **Next** to continue.

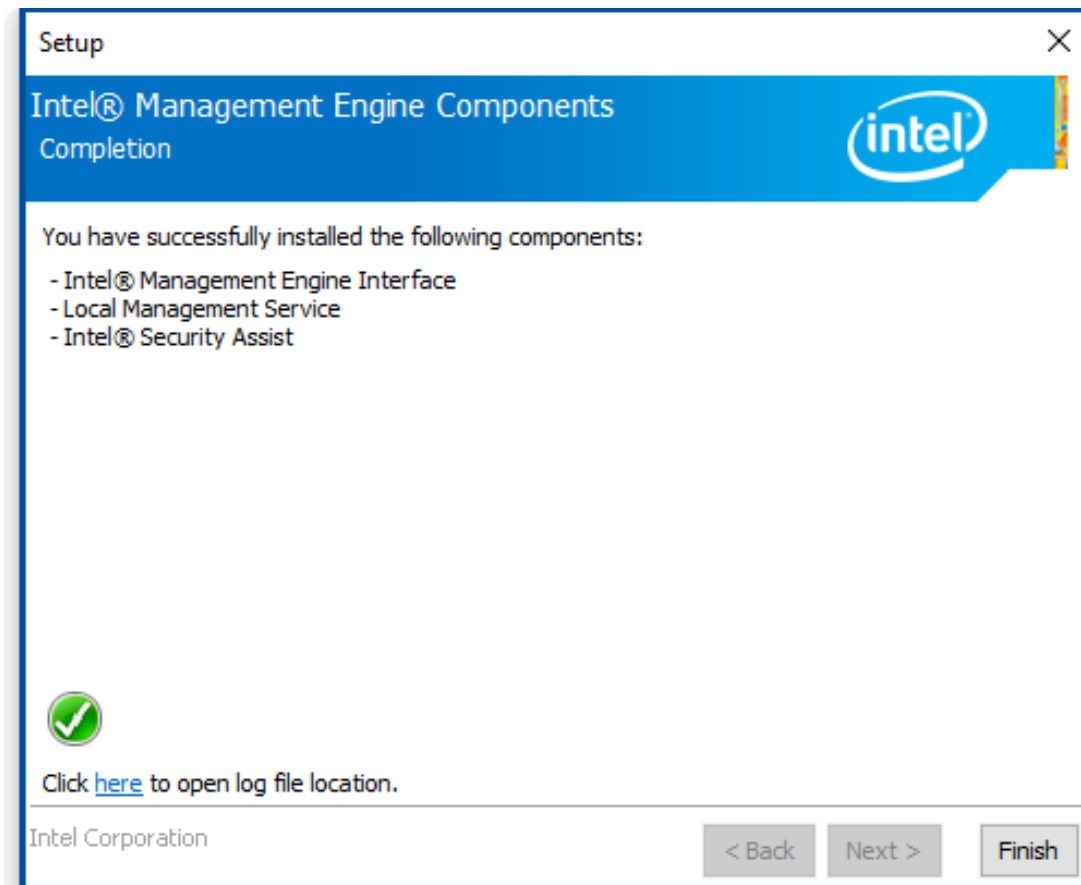

Step 3. Choose **I accept the terms in the License Agreement** and click **Next** to begin the installation.

Step 4. Click **Next** to continue.

Step 5. Click **Finish** to complete the installation.

4.5 DPTF Driver

To install the DPTF Driver, please follow the steps below.

Step 1. Select **DPTF Driver** from the list

Step 2. Click **Next** to continue.

Step 3. Read the license agreement. Choose **Accept** and click **Next** to accept all of the terms of the license agreement.

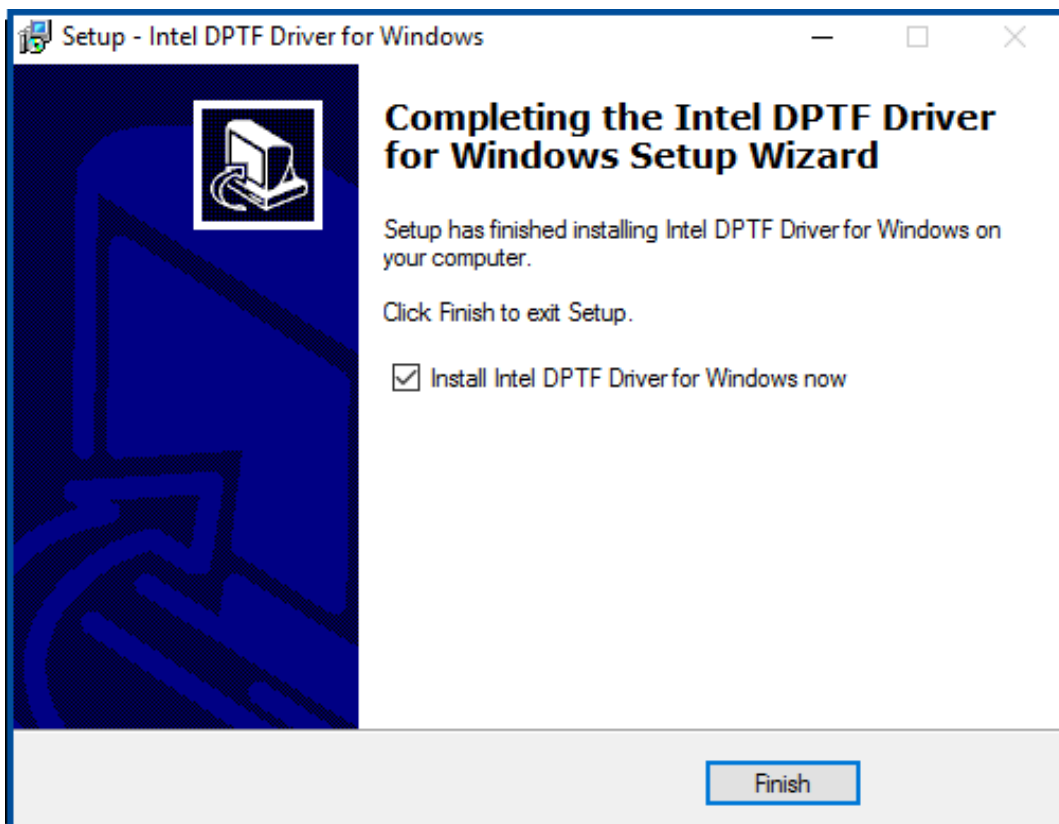

Step 4. Select destination location by your option and click **Next** to continue.

Step 5. Click **Install** to continue the installing.

Step 6. Click **Finish** to complete the installation and start install Intel DPTF driver for Windows.

Step 7. Click **Next** to start the installation.

Step 8. Read the license agreement. Click **Yes** to accept all of the terms of the license agreement.

Step 9. Click **Next** to continue.

Step 10. Click **Finish** to complete the installation.

This chapter describes how to install drivers and other software that will allow your touch screen work with different operating systems.

5.1 Windows 8.1/10 Universal Driver Installation for PenMount 6000 Series

Before installing the Windows 8.1/10 driver software, you must have the Windows 8.1/10 system installed and running on your computer. You must also have one of the following PenMount 6000 series controller or control boards installed: PM6500, PM6300.

Resistive Touch

If you have an older version of the PenMount Windows 7 driver installed in your system, please remove it first. Follow the steps below to install the PenMount DMC6000 Windows 7 driver.

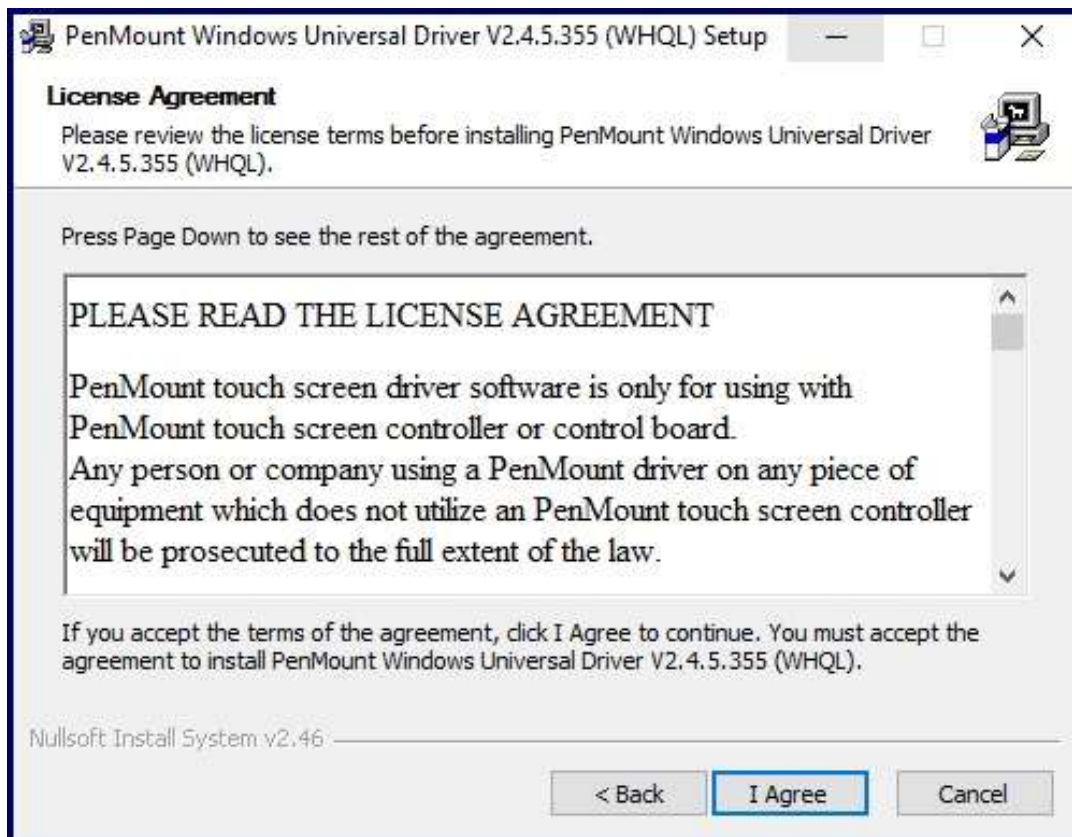

Step 1. Insert the product CD, the screen below would appear. Click **Touch Panel Driver** from the list.

Step 2. Click **Next** to continue.

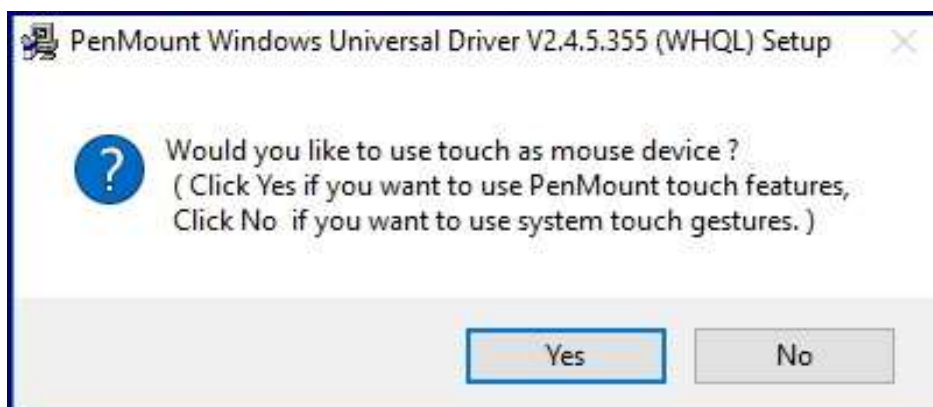

Step 4. Read the license agreement. Click **I Agree** to agree the license agreement.

Step 5. Choose the folder in which to install PenMount Windows Universal Driver. Click **Install** to start the installation.

Step 6. Click **Yes** to continue.

Step 7. Click **Finish** to complete installation.

5.2 Software Functions

Resistive Touch

Upon rebooting, the computer automatically finds the new 6000 controller board. The touch screen is connected but not calibrated. Follow the procedures below to carry out calibration.

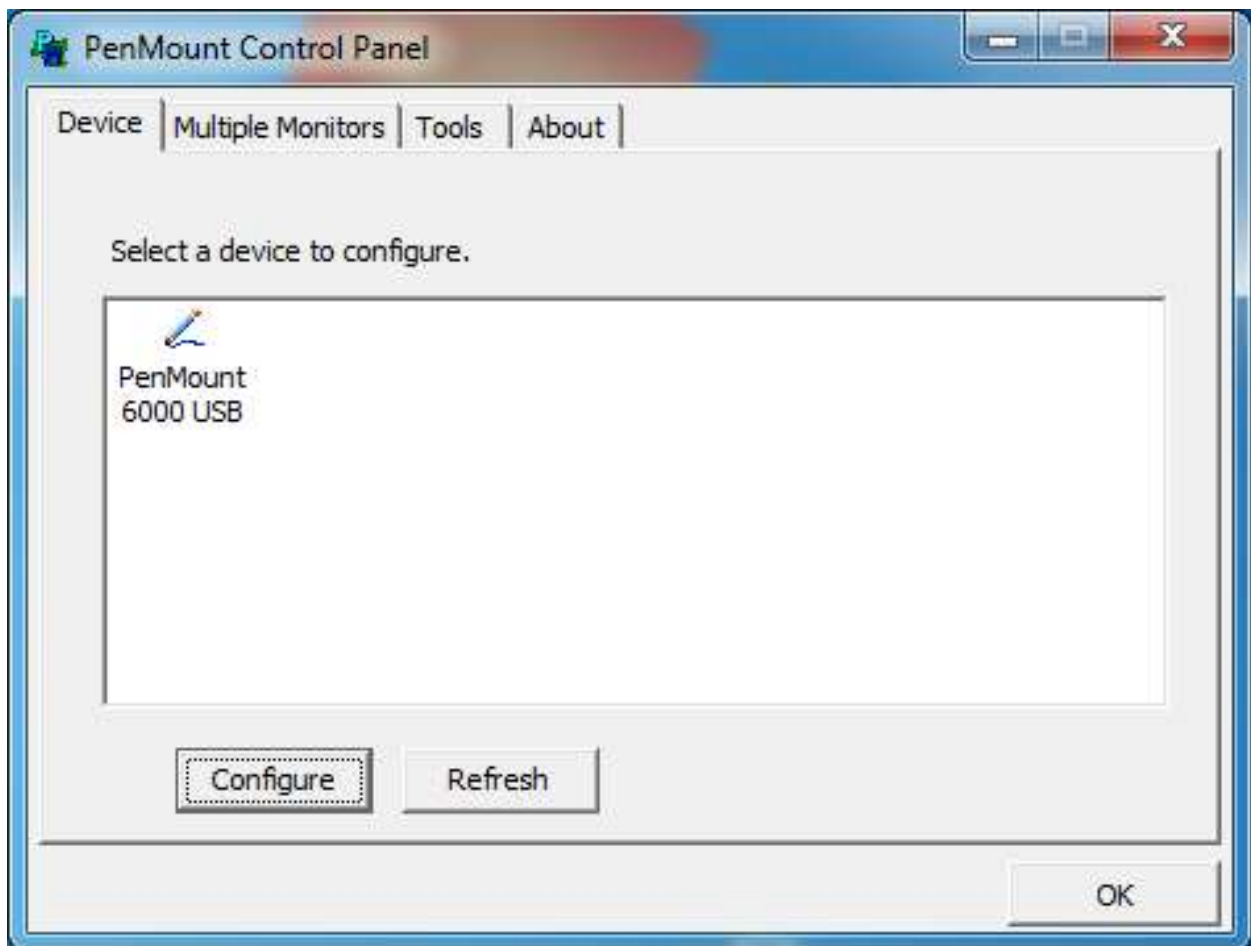

1. After installation, click the PenMount Monitor icon “PM” in the menu bar.
2. When the PenMount Control Panel appears, select a device to “Calibrate.”

PenMount Control Panel(Resistive Touch)

The functions of the PenMount Control Panel are **Device**, **Multiple Monitors** ,**Tools** and **About**, which are explained in the following sections.

Device

In this window, you can find out that how many devices be detected on your system.

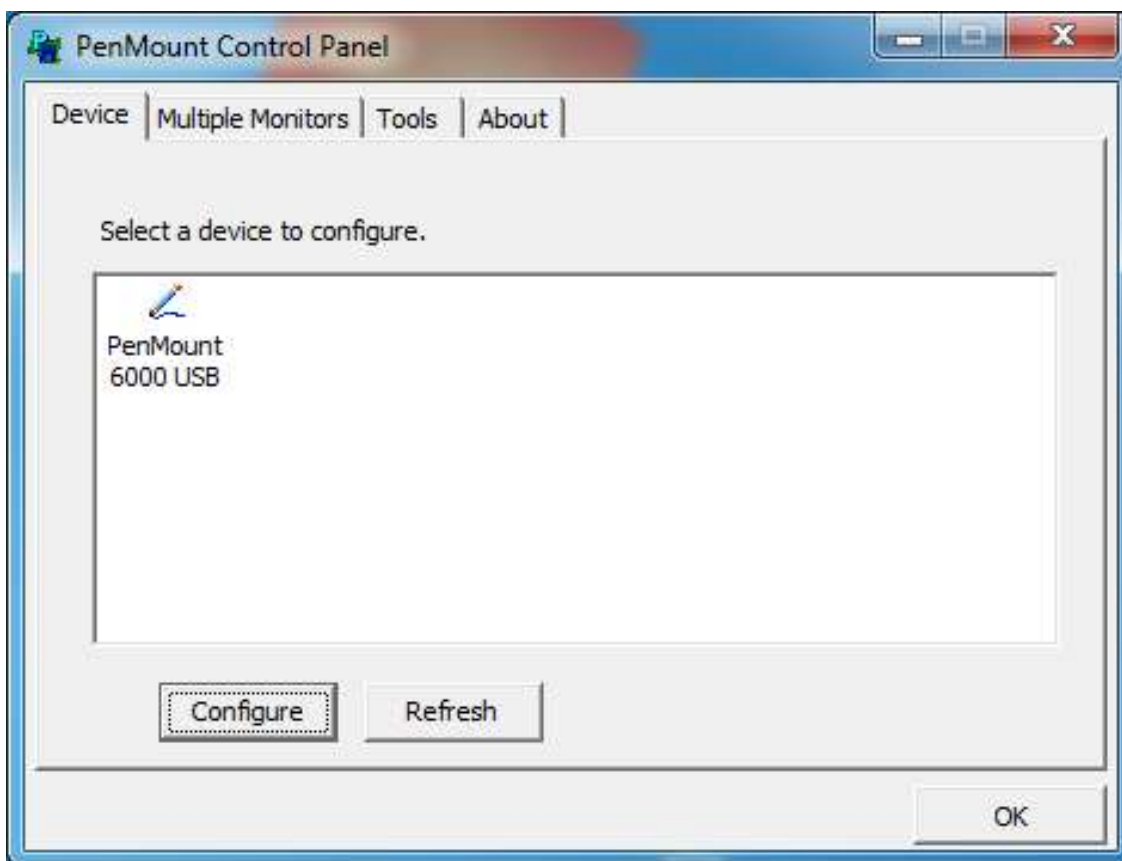

Calibrate

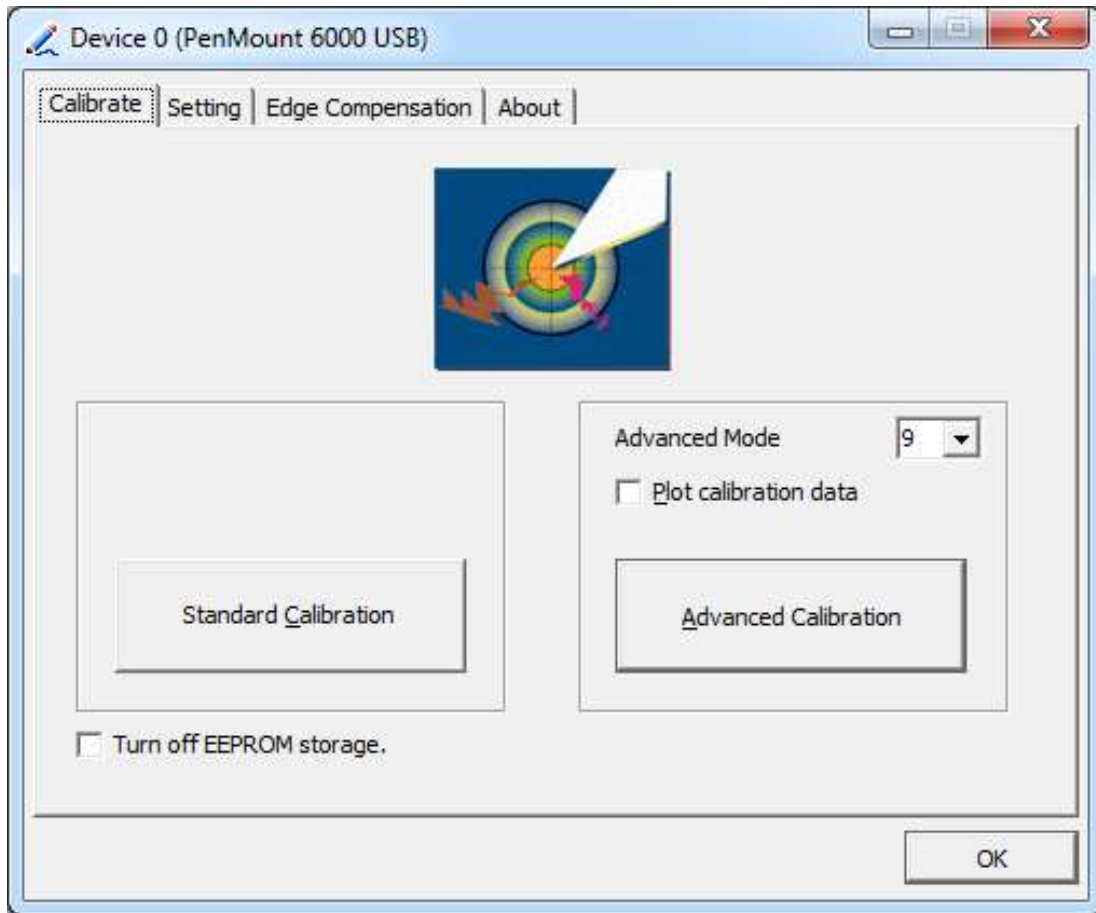

This function offers two ways to calibrate your touch screen. 'Standard Calibration' adjusts most touch screens. 'Advanced Calibration' adjusts aging touch screens.

Standard Calibration	Click this button and arrows appear pointing to red squares. Use your finger or stylus to touch the red squares in sequence. After the fifth red point calibration is complete. To skip, press 'ESC'.
Advanced Calibration	Advanced Calibration uses 4, 9, 16 or 25 points to effectively calibrate touch panel linearity of aged touch screens. Click this button and touch the red squares in sequence with a stylus. To skip, press ESC'.

Step 1. Please select a device then click "Configure". You can also double click the device too.

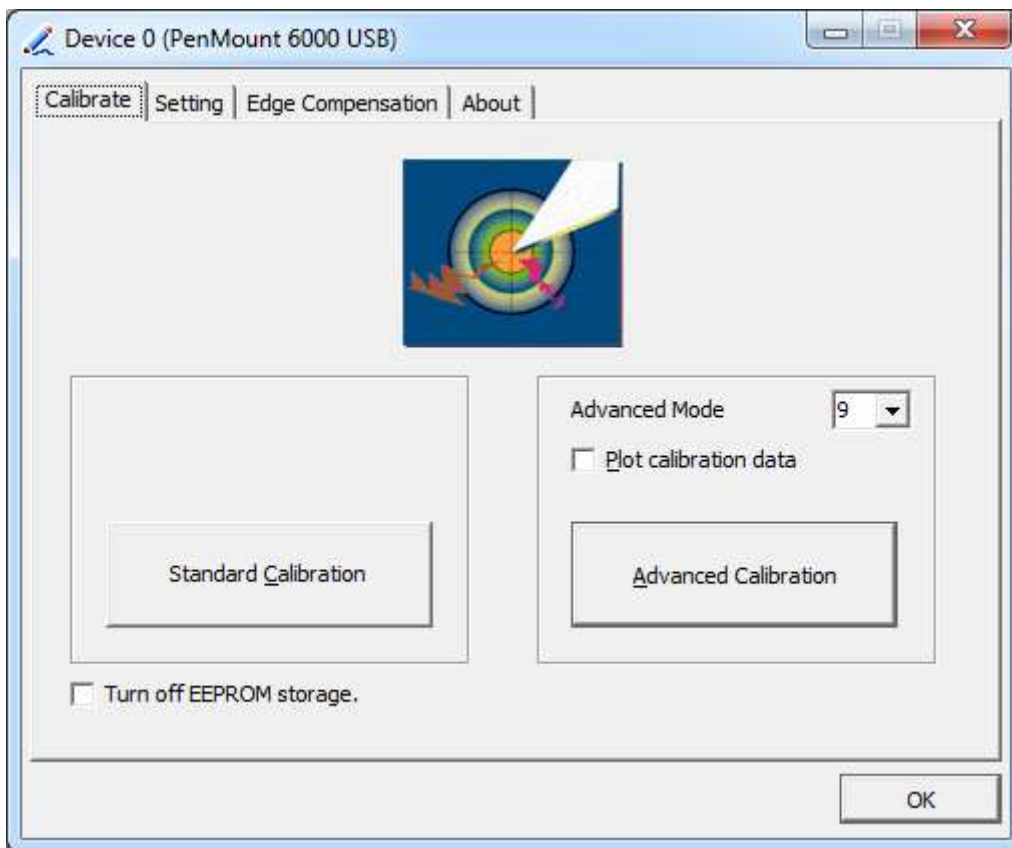

Step 2. Click “Standard Calibration” to start calibration procedure

NOTE: The older the touch screen, the more Advanced Mode calibration points you need for an accurate calibration. Use a stylus during Advanced Calibration for greater accuracy. Please follow the step as below:

Step 3. Select **Device** to calibrate, then you can start to do **Advanced Calibration**.

NOTE: Recommend to use a stylus during Advanced Calibration for greater accuracy.

Plot Calibration Data	Check this function and a touch panel linearity comparison graph appears when you have finished Advanced Calibration. The blue lines show linearity before calibration and black lines show linearity after calibration.
Turn off EEPROM storage	The function disable for calibration data to write in Controller. The default setting is Enable.

Setting

Touch Mode	<p>This mode enables and disables the mouse’s ability to drag on-screen icons – useful for configuring POS terminals.</p> <p>Mouse Emulation – Select this mode and the mouse functions as normal and allows dragging of icons.</p> <p>Click on Touch – Select this mode and mouse only provides a click function, and dragging is disables.</p>
Beep Sound	<p>Enable Beep Sound – turns beep function on and off</p> <p>Beep on Pen Down – beep occurs when pen comes down</p> <p>Beep on Pen Up – beep occurs when pen is lifted up</p> <p>Beep on both – beep occurs when comes down and lifted up</p> <p>Beep Frequency – modifies sound frequency</p> <p>Beep Duration – modifies sound duration</p>
Cursor Stabilizer	Enable the function support to prevent cursor shake.
Use press and hold as right click	You can set the time out and area for you need.

Edge Compensation

You can use Edge Compensation to calibrate more subtly.

About

This panel displays information about the PenMount controller and driver version.

Multiple Monitors

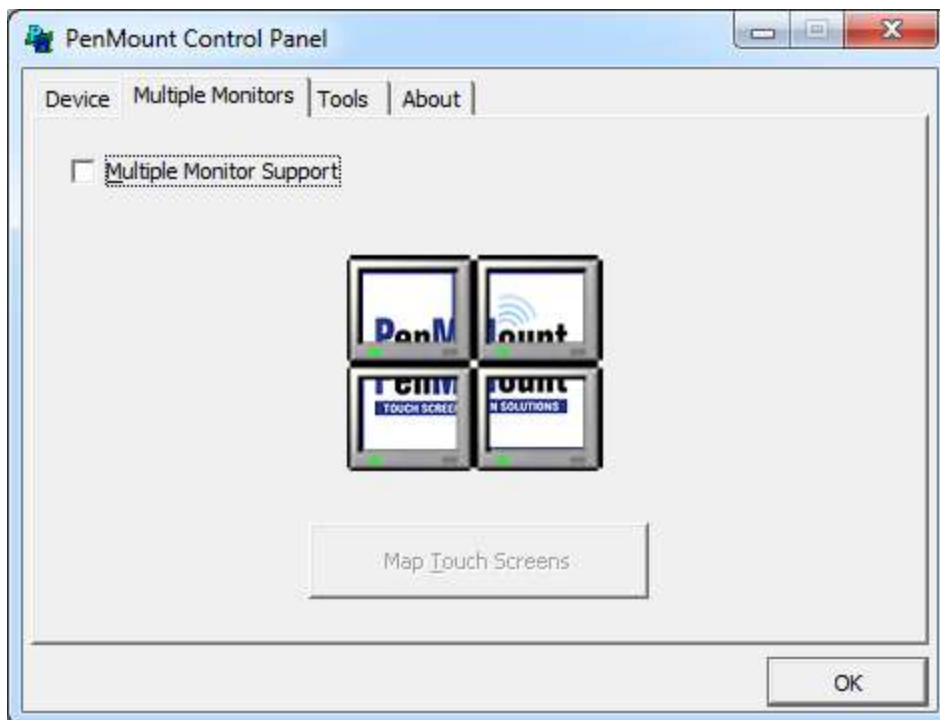

Multiple Monitors support from two to six touch screen displays for one system. The PenMount drivers for Windows 7/8/8.1 support Multiple Monitors. This function supports from two to six touch screen displays for one system. Each monitor requires its own PenMount touch screen control board, either installed inside the display or in a central unit. The PenMount control boards must be connected to the computer COM ports via the USB interface. Driver installation procedures are the same as for a single monitor. Multiple Monitors support the following modes:

- Windows Extends Monitor Function
- Matrox DualHead Multi-Screen Function
- nVidia nView Function

NOTE: The Multiple Monitor function is for use with multiple displays only. Do not use this function if you have only one touch screen display. Please note once you turn on this function the rotating function is disabled.

Enable the multiple display function as follows:

1. Check the **Enable Multiple Monitor Support** box; then click **Map Touch Screens** to assign touch controllers to displays.

2. When the mapping screen message appears, click **OK**.
3. Touch each screen as it displays "Please touch this monitor". Following this sequence and touching each screen is called **mapping the touch screens**.

4. Touching all screens completes the mapping and the desktop reappears on the monitors.
5. Select a display and execute the "Calibration" function. A message to start calibration appears. Click **OK**.

6. "Touch this screen to start its calibration" appears on one of the screens. Touch the screen.
7. "Touch the red square" messages appear. Touch the red squares in sequence.
8. Continue calibration for each monitor by clicking **Standard Calibration** and touching the red squares.

NOTES:

1. If you use a single VGA output for multiple monitors, please do not use the **Multiple Monitor** function. Just follow the regular procedure for calibration on each of your desktop monitors.
2. The Rotating function is disabled if you use the Multiple Monitor function.
3. If you change the resolution of display or screen address, you have to redo **Map Touch Screens**, so the system understands where the displays are.

About

This panel displays information about the PenMount controller and this driver version.

PenMount Monitor Menu Icon

The PenMount monitor icon (PM) appears in the menu bar of Windows 7/8/8.1 system when you turn on PenMount Monitor in PenMount Utilities.

PenMount Monitor has the following function

Control Panel	Open Control Panel Windows
Beep	Setting Beep function for each device
Right Button	When you select this function, a mouse icon appears in the right-bottom of the screen. Click this icon to switch between Right and Left Button functions.
Exit	Exits the PenMount Monitor function.

Configuring the Rotate Function

1. Install the rotation software package.
2. Choose the rotate function (0°, 90°, 180°, 270°) in the 3rd party software. The calibration screen appears automatically. Touch this point and rotation is mapped.

NOTE: The Rotate function is disabled if you use Monitor Mapping
