## **PLC Settings:**

#### • Support PLC firmware version V2.80 and previous versions

To support CPU 1510SP F-1 PN (ET200S), the access level must be set to full access incl.

Access level		Ac	cess		Access per_	
	HMI	Read	Write	Fail-safe	Password	
Full access incl. fail-safe (no protection)	~	~	~	~		
Full access (no protection)	~	~	~			
Read access	~	~				
HM access	~					
No access (complete protection)						

PLCs (S71200/FW4.2/ & S7-1500/FW1.7/) firmware version and above support HMI access using password function

Note: If the user sets the HMI access level, the password of full access or read access must be used to communicate.

#### • Legacy and secure PG/PC communication permitted

[Only allow secure PG/PC and HMI communication] This setting item is not supported,

please do not check it.

Legacy and secure PG/PC communication permitted:
- Communication security to PG/PC and HMI according to the options of both communication $\ensuremath{partners}$
- Communication to TIA Portal < V17 and HMI systems < V17 is possible. Higher TIA Portal versions require a separate activation of the Legacy communication.
<ul> <li>Communication performance might be higher when only legacy PG/PC communication is used</li> </ul>
Only allow secure PG/PC and HMI communication

# Get Tag Info:

- 1. In S7-1500 program software create PLC program and tag and then download to PLC.
- Select Go offline, EasyBuilder will connect to PLC and get tag data. In PLC type select "Siemens S7-1200/S7-1500 (S7CommPlus, Symbolic Addressing) (Ethernet)".

## **Import Tags**

Apart from using Get Tag on HMI, tags from Siemens TIA project can be imported in EasyBuilder Pro.

\* At least one db file must be imported. If only plc tags cannot be imported successfully.

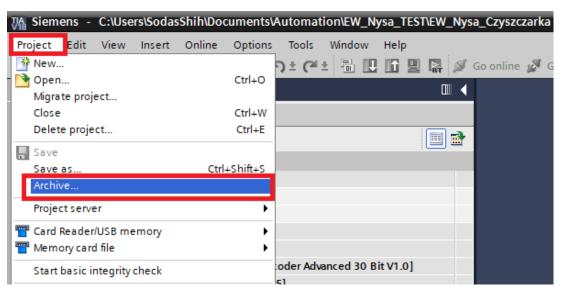

1. In System Parameter Settings add S7-1200/1500 into the device list and then click [Import Tags...].

2. Select the **\*.ap\*(\*.apxx)** file.

When the \*.ap file cannot be imported, you can try [**Project**] -> [Archive] and then import it again.

\*Note1. Before importing TIA Files, users need to compile the file and download it to the PLC.

Both single-dimensional arrays and multi-dimensional arrays can start with non-zero values.

Example: [1..9], or [1..3,2..5]

- Importing data types other than those in the above table may result in failure to communicate.
- Address tags do not allow the use of special characters, such as: [] " ",. etc., which may cause unexpected situations such as import exceptions or communication exceptions.
