1. Overview and Operation

Overview

This demo project shows how to connect an Android phone to an HMI via USB and share the internet.

Operation

Have the Android phone and USB cable ready and follow these steps:

1. Connect the Android phone to the HMI, go to the phone's settings to enable USB tethering, and tap "Start" on HMI to connect.

- 2. Check the connection status; it should display “Connected”, indicating that the HMI can use the shared internet from the Android phone.

2. Object List

Key objects used in the project are listed below, please adjust as necessary.

Object	Description
Window 10	
Set Word	Starts or stops USB tethering.
Word Lamp	Displays connection status.
